

Managed Network Cloud Firewall

Managed Network Cloud Firewall is a fully managed service that takes care of your network attack surface management, helping you continuously optimize and evolve your firewall protections.

Backed by Akamai's dedicated security experts, the managed service empowers your organization to stay one step ahead of emerging threats and vulnerabilities while maintaining a proactive, resilient security posture. Our experts provide immediate assistance during critical security events, ensuring your defenses are always ready when you need them most.

Managed Network Cloud Firewall

Akamai's Managed Network Cloud Firewall service provides expert management and optimization of Network Cloud Firewall, complementing the powerful, easy-to-deploy, and easy-to-use tool that quickly, centrally, and globally blocks traffic from hitting your network.

With Network Cloud Firewall deployed at the edge of a customer's network, security teams don't have to wait for other groups or providers to apply changes to distributed local network firewalls and other defense systems. Instead, Akamai's services team can block malicious traffic centrally when zero-day vulnerabilities or similar emergencies require immediate action.

Key features

Onboarding and rule conversion

- Let Akamai security experts convert your existing firewall rules and policies into Network Cloud Firewall, ensuring seamless integration while preserving your current security posture.

Enhanced security posture

- Regular reviews and updates of firewall rules help organizations stay ahead of evolving threats and minimize vulnerabilities.

Business continuity

- Early detection and response to firewall issues reduce the likelihood of disruptions to critical business operations.

Rapid incident response and threat detection

- Real-time monitoring enables immediate identification of potential security incidents and ensures quick action to security events.

Operational efficiency

- Free up IT teams to focus on strategic initiatives rather than routine firewall management.
