Layered Solutions That Power, Protect, and Support Critical Agency Assets

Federal civilian agencies and state and local governments (SLGs) are in a unique position to advance security, improve assets, and optimize the user experience. A shift in workforce practices and an evolving cybersecurity landscape provide the opportunity to scale their digital modernization efforts in alignment with mission-critical operations.

Akamai enables a holistic approach to digital transformation using the world's most distributed platform for cloud computing, security, and content delivery.

Unified solutions for public sector agencies

With software-defined policy management, Akamai's platform delivers layered solutions that enable public sector agencies to meet their most rigorous security and user experience challenges—without sacrificing performance.

Akamai Connected Cloud, a massively distributed edge and cloud platform, provides unrivaled threat intelligence to allow agencies to scale in response to growing needs. Its best-in-class foundation with FedRAMP Moderate ATO powers performance in resilient security, computer, and content delivery.

Benefits of a modernized and segmented agency environment

Akamai enables comprehensive digital transformation for agencies in myriad ways by providing:

- **Secure and smooth cloud migration with comprehensive software-based segmentation and visibility:** Akamai delivers unified visibility across all network environments and software-defined segmentation that visualizes and controls communication between apps on the network.

- **Balanced, complete North-South-East-West security and performance:** Platforms reduce the attack surface of complex, multi-cloud environments, and limit user access to just the applications they need.

- **Innovative threat landscape mitigation:** Keep pace with evolving needs through innovative solutions.

- **Phish-proof Multi-Factor Authentication (MFA):** Services provide automated provisioning and self-service enrollment.

Reshaping cybersecurity for modern workflows

The Akamai platform eliminates silos to help agencies get a more complete view of threats and risks. Rather than individual platforms and tools from different vendors that are built for one-off requirements and don't speak to each other, Akamai enables integrations between solutions to give agencies one place to go for support and answers.

Additionally, Akamai Connected Cloud executes end-to-end control of the conversation with an endpoint mindset. Combined with continuous denial of trust and ongoing integration investments, this solution is unparalleled in its ability to deliver security designed for modern workflows.

Akamai wins for IT and cloud modernization

Shifting perimeters, growing complex attack surfaces, and evolving Zero Trust mandates are pushing federal civilian agencies and SLGs to switch to hybrid cloud environments.

To provide expansive, smart modernization of agency environments, Akamai Connected Cloud layers services and solutions: Akamai Segmentation, Enterprise Application Access (EAA), and MFA. Together, these solutions deliver:

Trust and performance
- Trusted to protect mission environments across federal civilian agencies and SLGs
- Balanced security and performance with unprecedented scalability
- Built-in unmatched context and threat intelligence

Complete visibility and control across agency environments
- Granular, intelligent segmentation that isolates workloads wherever they reside
- Centralized visibility and control of user access, device posture, threat detection, and response
- Complete North-South-East-West security of the whole environment
- Fast, frictionless, secure access to workloads from anywhere

Simplified environment and security management
- Managed access to every environment from a single, secure portal
- Single platform for access controls, network visualization, segmentation, threat defense, and auditing Zero Trust
- Secure app access service that deploys in minutes
- Fast, intuitive implementation of segmentation and access controls

---

Akamai solutions

- **Akamai Connected Cloud** for cloud computing, security, and content delivery
- **Akamai Guardicore Segmentation** that provides the simplest, fastest, and most intuitive way to enforce Zero Trust principles
- **Enterprise Application Access** to scale remote access without slow, clunky VPNs
- **Multi-Factor Authentication (MFA)** for frictionless, phish-proof, secure access
