

Akamai and Ping Identity

Streamline access controls and protect against risky user interactions

Ping Identity is a leading provider of customer identity and access management (CIAM) solutions that enable secure and seamless digital experiences. Its platform helps enterprises manage how users interact with their systems by ensuring secure access to applications and services. [Akamai Account Protector](#) is a security solution designed to prevent account abuse, using machine learning and a significant dataset of risk and trust indicators to determine the legitimacy of a user request.

Akamai and Ping Identity partnership

Providing robust protection against account abuse

Simplify and strengthen customer interactions with Ping Identity's industry-leading identity management and Akamai Account Protector. Mitigate expensive and dangerous account abuse, including sophisticated bot attacks, account takeover, and more. By integrating authentication, profile management, and risk intelligence, businesses can implement consistent security controls across user registrations, logins, and profile updates. Customers can use identity, risk-based policies, and advanced threat intelligence to deliver frictionless, secure digital experiences.

Seamless integration to proactively mitigate risk

With Ping Identity, Account Protector customers can easily integrate the solution's advanced risk detections and intelligence into existing CIAM workflows. Automatically detect and respond to risky events, such as high-risk logins or registrations, by triggering response actions directly in the Ping Identity platform.

How it works

The integration forwards risk signals from Account Protector directly to Ping Identity during registration, login, or other user interactions. Based on configurable thresholds, Ping Identity can initiate mitigation actions, such as requiring additional verification steps or blocking the interaction outright.

Benefits for your business

Proactive risk mitigation

Risk signals from Akamai Account Protector enable Ping Identity to trigger mitigating actions in real time

Streamlined integration

Easily integrate into Ping Identity workflows for enhanced security

Frictionless customer experience

Protect interactions without compromising the experience customers expect
